

Quick programming

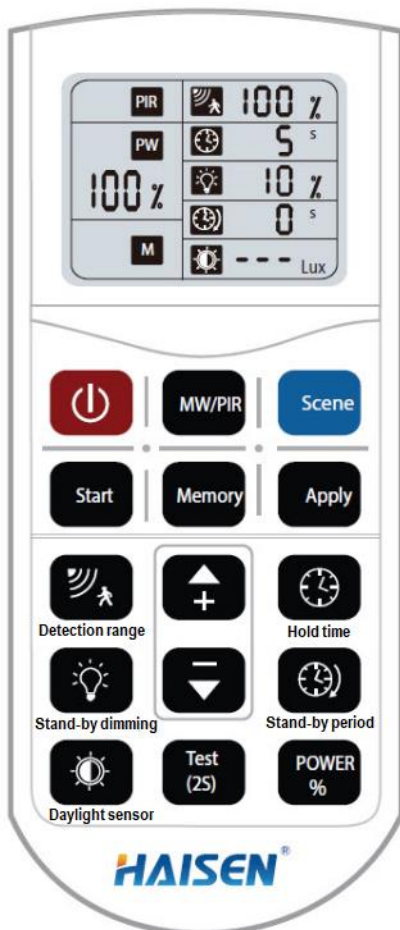

"Scene" button brings back factory default program

1. Press on 
2. Press on  by pointing the luminaire to be programmed with the remote control

| Default setting |  |  |  |  |  | Application |
|-----------------|---|---|--|---|---|-------------|
| Scene | 100% | 5s | 0s | 10% | disabl e | General |

Note: it will always be possible to change parameters afterwards

Description of main functions

To turn On/Off the luminaire or deactivate the motion sensor function

To switch between microwave technology and PIR (Passive InfraRed)

Popular: MW

Activates detector/programming mode and restores factory default settings

Buttons for saving the chosen settings and applying them to the luminaires within reach of the remote

Motion sensor detection area
25% = narrow; 100% = wide

Stand-by period dim level
Light level during the stand-by period

Popular: from 30% to 50%

Ambient light detection

Normally:
disable

Holding period
Time to first reduction in light level

Popular : 30 min

Stand-by period
Time before the luminaire turns off

Populaire : + ∞
(never turns off)

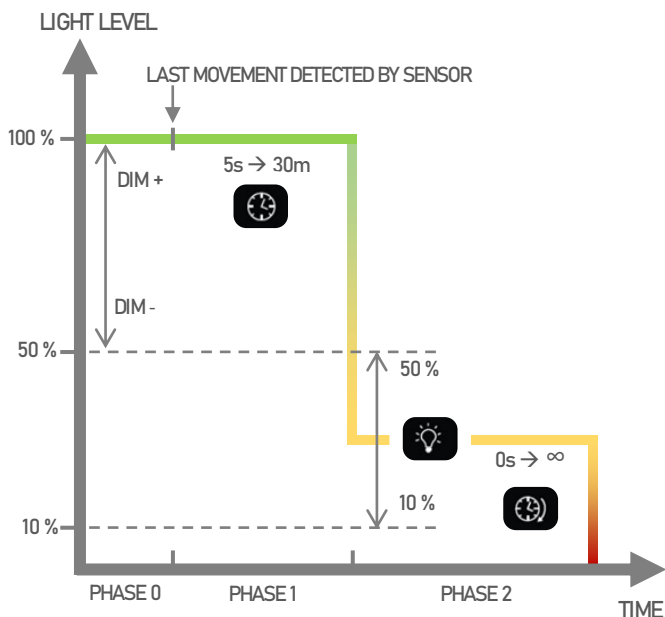

To increase or reduce the lighting level of the luminaire when a person is present

Allows you to increase or decrease the values

Note: « Test (2s) key is not used

Principle of operation

Phase 0 : As long as a person is detected by the sensor, the luminaire is at its maximum intensity.
Adjustable lighting level with « Power % »

Phase 1 : In the absence of movement, the luminaire will hold its maximum intensity for a selectable duration of 5s / 30s / 1min / 3min / 5min / 10min / 20min / 30min. (hold period)

Phase 2 : If no movement is detected during the hold period, the luminaire will dim to an adjustable intensity of 10% / 20% / 30% / 50% (stand-by period).

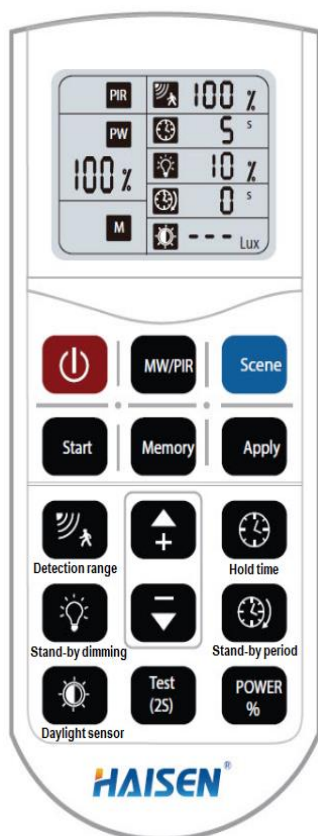

The reduced light level will be maintained for a selectable duration of 0s / 10s / 30s / 1min / 5min / 10min / 30min / 60min / - - before going off.

Example:

By adjusting the stand-by period to 0s, the luminaire will turn off directly after the hold period without going through a reduction in lighting.

By adjusting the stand-by period to - -, the light will keep its intensity reduced indefinitely without ever turning off in the absence of movement.

Detailed programming procedure

Procedure

- Scene** 1- Press to activate programming mode
- Start** 2- Press on « Start » (**S** flashes) and press the parameter to be modified (parameter icon flashes)
 Modify the parameters using the + or - keys
- Memory** 3- Press once all parameters have been changed
- Apply** 4- Select the motion sensor detection area
note: the wider the area, the faster motion is detected

Notes

- Select the motion sensor detection area
note: the wider the area, the faster motion is detected
- Select the stand-by period dim level
Note: lighting level is a % of maximum intensity
- Select the duration of the hold period
note: if no movement, intensity remains at maximum for this duration
- Select the duration of the stand-by period
note: length of time the luminaire remains in reduced lighting before switching off
- Disable the function « Ambient light detection »

Recommendations for the optimum operation of motion sensors

- 1- Maintain a minimum distance of 3 meters between motion sensors.
 - 2- Suspended fixtures should be installed on rods instead of chains to prevent fixture movement. Movement of the luminaire may trigger false motion detection.
 - 3- The motion sensor does not differentiate between a human and any other moving objects within its detection zone. So, beware of fans, forced air heating equipment, conveyors or any other equipment that could create movement on objects and thus trigger a false detection
 - 4- Large reflective surfaces (metal, concrete or glass) near a motion sensor may cause false detections due to microwave reflection off these surfaces.
 - 5- We recommend a preliminary installation of a few luminaires to validate the performance of the motion sensors in the project environment.
 - 6- **Caution:** The installation of a luminaire equipped with a motion sensor does not replace the installation of a night light for security. Light fixtures with a motion sensor are intended to reduce power consumption, not to replace a circuit breaker.
-
